INTRODUCTION :-

- ## Languages :-
    1. Html (to do structure the page)
    2. Css (to give style the page)
    3. JS
    4. Php (Database connection and also fetch the data)

➔ Our project based on the there are one Clinic for that Clinic we make a one online appointment booking system.

➔ For that we make one database which contains a four table :
1. Tblappointment
2. Tbldoctor
3. Tblpage
4. Tblspecialization

➔ In this appointment table I added the attributes like AppointmentNumber , Name , MobileNumber , Email , AppointmentDate , AppointmentTime , Specialization , Doctor , Message , ApplyDate , Remark , Status , UpdationDate .

➔ In this Tbldoctor table I added attributes Like ID , FullName , MobileNumber , Email , Specialization , Password , CreationDate.

➔ In this Tblpage table I added attributes like for the our Clinic email and mobile number and also give the addresses .

➔ In this Tblspecialization table I added attributes like Id , Specialization and added date .

➔ For connection this database to html , css I used a Php languages in php languages using pdo method I connect the database with my HTML and CSS.

Database tables Photo :-

Clinic Appointment Management System

➔ In this dashboard doctor have to control the all appointment approval and cancelled also give the remark the appointment.

➔ Also having the changes in the profile of doctors.

➔ Also forgot the password system available and also the searching the appointment between specific dates also facility available.

➔ Also in this project you able to do rescheduling the appointment of patient because if any want more medical visit so that's why I need to do reschedule the appointment.

➔ Basically this project based on the online clinic appointment management system and it's also help to patient to take a appointment.

➔ There is rescheduling of appointment automatically generate by the doctor if it is required for the patient.

➔ Also in validation available in the all form like Booking appointment , Doctor Login and Signup Page.
